Preface	vii
PART 1. FUNDAMENTALS OF STRUCTURE FORMATION	1
Chapter 1. Introduction and Cosmological Background	3
1.1 Preliminary Remarks	3
1.2 Standard Cosmological Model	5
1.3 Milestones in Cosmic Evolution	17
1.4 Most Matter is Dark	21
Chapter 2. Linear Growth of Cosmological Perturbations	25
2.1 Growth of Linear Perturbations	25
2.2 The Thermal History During the Dark Ages	36
Chapter 3. Nonlinear Structure and Halo Formation	41
3.1 Spherical Collapse	41
3.2 Cosmological Jeans Mass	45
3.3 Halo Properties	51
3.4 Abundance of Dark Matter Halos	58
3.5 Halo Clustering in Linear Theory	67
3.6 The Nonlinear Power Spectra of Dark Matter and Galaxies	71
3.7 Numerical Simulations of Structure Formation	81
Chapter 4. The Intergalactic Medium	95
4.1 The Cosmic Web	95
4.2 Lyman- α Absorption in the Intergalactic Medium	99
4.3 Theoretical Models of the Lyman- α Forest	105
4.4 The Metagalactic Ionizing Background	118
4.5 The Helium-Ionizing Background	124
4.6 Metal Line Systems	125
4.7 The Lyman- α Forest at $z > 5$	128
PART 2. THE FIRST STRUCTURES	135
Chapter 5. The First Stars	137
5.1 From Virialized Halos to Protostars	140
5.2 From Protostars to Stars	150

5.3	The Second Generation of Stars: “Population III.2”	161
5.4	Properties of the First Stars	167
5.5	The End States of Population III Stars	172
5.6	Gamma-Ray Bursts: The Brightest Explosions	177
Chapter 6. Stellar Feedback and Galaxy Formation		180
6.1	The Ultraviolet Background and H ₂ Photodissociation	180
6.2	The X-Ray Background: Positive Feedback	190
6.3	Radiative Feedback: Mechanical Effects	193
6.4	Galactic Superwinds and Mechanical Feedback	200
6.5	Metal Enrichment and the Transition to Population II Star Formation	209
6.6	The First Galaxies	220
Chapter 7. Supermassive Black Holes		226
7.1	Quasars and Black Holes: An Overview	226
7.2	Basic Principles of Astrophysical Black Holes	232
7.3	Accretion of Gas onto Black Holes	234
7.4	The First Black Holes and Quasars	241
7.5	Black Holes and Galaxies	246
7.6	Black Hole Binaries	253
7.7	Gravitational Waves from Black Hole Mergers	255
Chapter 8. Physics of Galaxy Evolution		259
8.1	High-Redshift Galaxies	260
8.2	Gas Accretion	262
8.3	Halo Mergers	264
8.4	Disk Formation	265
8.5	Star Formation in Galaxies	266
8.6	Black Hole Growth in Galaxies	271
8.7	Feedback and Galaxy Evolution	272
8.8	From Galaxy Model to Stellar Spectra	274
8.9	Signatures of the Interstellar Medium	277
8.10	Gravitational Lensing	285
Chapter 9. Reionization of Cosmic Hydrogen by the First Galaxies		294
9.1	Propagation of Ionization Fronts	295
9.2	Global Ionization History	299
9.3	The Phases of Hydrogen Reionization	302
9.4	The Morphology of Reionization	304
9.5	Recombinations Inside Ionized Regions	310
9.6	Simulations of Reionization	317
9.7	Statistical Properties of the Ionization Field	322
9.8	Reionization by Quasars and Other Exotic Sources	327
9.9	Feedback from Reionization: Photoheating	334
PART 3. OBSERVATIONS OF THE COSMIC DAWN		341
Chapter 10. Surveys of High-Redshift Galaxies		343

CONTENTS	v
10.1 Telescopes to Observe High-Redshift Galaxies	344
10.2 Methods for Identifying High-Redshift Galaxies	349
10.3 Luminosity and Mass Functions	357
10.4 The Statistics of Galaxy Surveys	364
Chapter 11. The Lyman-α Line as a Probe of the Early Universe	373
11.1 Lyman- α Emission from Galaxies	373
11.2 The Gunn-Peterson Trough	381
11.3 IGM Scattering in the Blue Wing of the Lyman- α Line	383
11.4 The Red Damping Wing	389
11.5 The Lyman- α Forest As a Probe of the Reionization Topology	393
11.6 Lyman- α Halos Around Distant Sources	396
11.7 Lyman- α Emitters During the Reionization Era	400
Chapter 12. The 21-cm Line	412
12.1 Radiative Transfer of the 21-cm Line	414
12.2 The Spin Temperature	416
12.3 The Brightness Temperature of the Spin-Flip Background	425
12.4 The Monopole of the Brightness Temperature	431
12.5 Statistical Fluctuations in the Spin-Flip Background	435
12.6 Spin-Flip Fluctuations During the Cosmic Dawn	442
12.7 Mapping the Spin-Flip Background	450
Chapter 13. Other Probes of the First Galaxies	462
13.1 Secondary Cosmic Microwave Background Anisotropies from the Cosmic Dawn	463
13.2 Diffuse Backgrounds From the Cosmic Dawn	471
13.3 The Cross-Correlation of Different Probes	485
13.4 The Fossil Record of the Local Group	489
Appendix A. Endnotes	496
Appendix B. Recommended Further Reading	502
Appendix C. Useful Numbers	504
